

## **ABSTRACT**

The system enables a user to select and order media objects, such as sound files, image files, animations, and text into a media presentation. The media presentation is then associated with a trigger or other interrupt event. Upon an occurrence of the event, the system plays the media presentation on system output devices. In one example of the system, the selected media files, ordering information, and other properties are assembled into a media package. The media package may be published to a remote device so that a remote device may play the media presentation.
